

RURAL TELEPHONY,

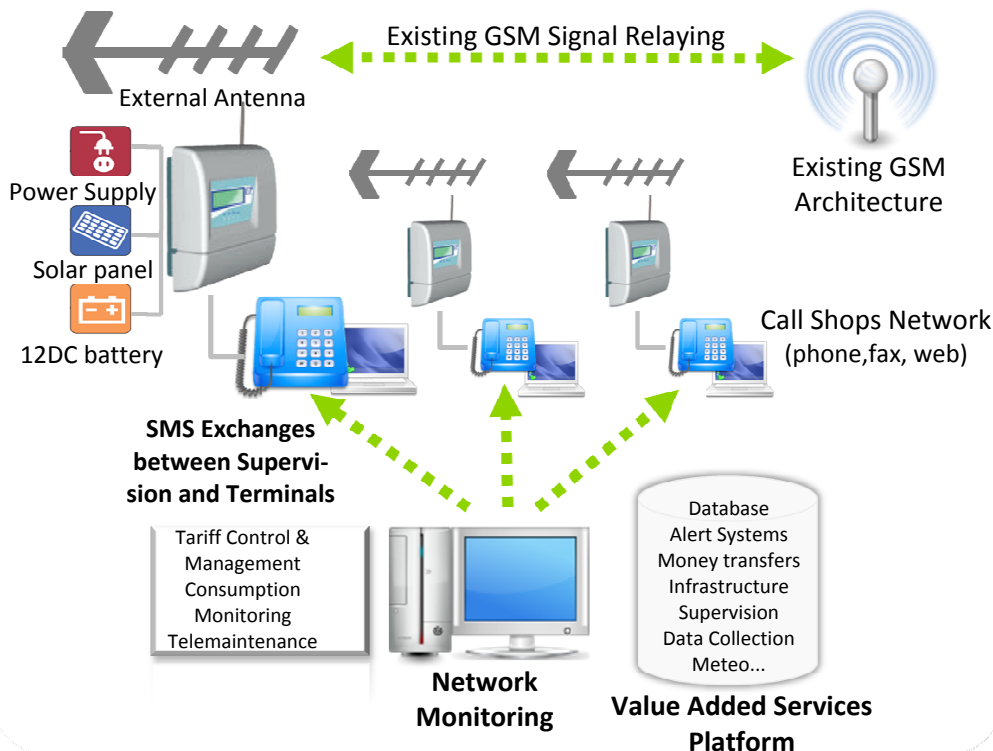

Bringing Information & Communication Technologies to everybody, everywhere.

Our concept of rural telephony offers remote/isolated populations, shared communal access to a local point of communication, thanks to the amplification and relaying of an existing GSM Signal.

Cintel's unique solution combines :

- ✓ Use of **existing GSM Infrastructure**
- ✓ **Tropicalized phone terminals** with autonomous power supply
- ✓ Access to all **communication services** (voice, fax, SMS, Internet – wherever available)
- ✓ **Network of call shops** allowing mutualization of communication services
- ✓ Full Network **Supervision**
- ✓ Access to numerous **Value Added Services**.

Radio Signal Relaying up to 32 km in line of sight, 64 km with optional « extended-cell » amplification

A Turnkey Solution

- ▶ **An all-inclusive packaged solution** including Software, equipment (aerials, phone terminals, solar power and batteries) with a Network Monitoring Application
- ▶ **A Network Monitoring Tool** allowing control of individual call-shop consumptions (incoming and outgoing calls), management of tariff tables, and remote maintenance
- ▶ **A platform dedicated to adding relevant contents** for the socio-economic development of target areas (commercial applications, data collection, territory administration)
- ▶ **A Unique Expertise allowing to take charge of your project** from planning to implementation : geomarketing and demographics studies, technical and financial engineering, regulatory studies, definition, design and launch of tenders, project management and deployment.

Contributing to rural development and reducing the digital divide
